

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

- It was easy to encapsulate the book preview itself.
- I just had to call the function that was created each time I had to use it .

2. What parts of encapsulating your logic were hard?

-I didn't really find anything difficult but i think this example was fairly easy.

3. Is abstracting the book preview a good or bad idea? Why?

I think it is a good idea because if you want to change how the page will be displayed then you can just edit once instead of each time you use the function this will also make it so that if there is a mistake you only need to fix it once .
